YSoft SafeQ Solution

YSOFT
SAFEQ[®]
Making the MFPs think...

YSoft SafeQ is a server-based application that extends the functions of printers and the printing environment, enabling you to monitor and control your entire print system.

YSoft SafeQ tracks every print and copy—so you know who is printing, what is printed, and which printers are used. You can use the knowledge you gain from YSoft SafeQ reports to analyze print operations across your organization, enabling you to optimize print resources to control costs and maximize convenience for users.

Exact cost-accounting, a high level of security, maximum availability, and one-click scan workflows are only a few of the benefits the YSoft SafeQ print solution provides.

Control access and improve security

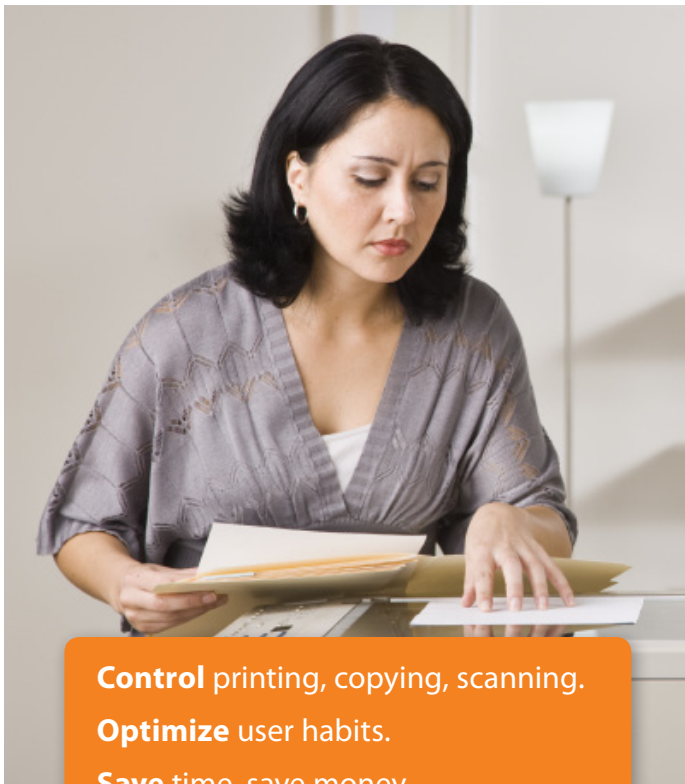

- Use YSoft SafeQ terminals to protect against unauthorized use of printers and MFPs
- Choose the authentication method that is best for your print environment: PIN, magnetic/smart card, and/or username/password
- Improve convenience and security with the Follow-me feature, which enables users to print their jobs at *any* printer in your organization—after they authenticate
- Set rights for individual users, roles and departments to make sure printers are used with maximum economy and convenience

Track and report every print, copy, and scan

- Accurately monitor all print, copy and scan operations
- Receive reports that detail print usage by individual users, departments or projects
- Set YSoft SafeQ to automatically send reports to your e-mail inbox or designated folder
- Obtain reports in a variety of formats (html, xls, xml, csv)

Credit system

- Account print jobs and related costs by user, group and project
- Simplify revenue collection with automatic Recharging Stations (especially useful for public institutions such as universities)
- Increase user convenience with Self-Service Recharging Stations that accept coins and banknotes
- Audit trail that enables regulatory compliance for all MFD-related processes
- Full insight into costs for all reprographic services

Control printing, copying, scanning.

Optimize user habits.

Save time, save money.

Secure your information.

Scan Management

- With one click, scan a document and automatically send the resulting scan to an e-mail inbox or a folder
- Easily set parameters for scans

Deployment

- Automated deployment across hundreds of branches and thousands of MFPs
- Centralized maintenance and administration with minimal demand on system resources

Saves IT time

- Easy administration from a task-based Web management console
- Seamless integration with existing network infrastructure

Specifications
