Organizations rely on paper and electronic documents to perform critical business processes. However, getting documents to where they need to be, in the file formats they need to be in, can be terribly inefficient. And as the volume of paperwork grows, trying to archive, maintain and retrieve stored document becomes a time and human resource issue. Xerox Scan to PC Desktop Professional 12 is designed to reduce or eliminate paper-based processes in everyday business environments, help better organize digital documents and, ultimately, bring about more efficiency in the workplace. Owing to its wealth of features, ease of use and other attributes, Xerox Scan to PC Desktop has been named a BLI Winter 2014 "Pick" award recipient as "Outstanding Desktop Document Management Solution."

"Xerox Scan to PC Desktop Professional is an impressive document management platform that delivers a wide range of advanced features," said BLI Senior Editor Lisa Reider. "Unlike other products, it includes most functionality in one bundle, rather than requiring extra-cost add-ons."

Scan to PC Desktop's class-leading range of features include one-touch custom scan workflows, advanced image editing tools to clean up documents, the ability to preview scans before routing, and all-in-one search capability (which allows users to find virtually any document in the system through text searches). The package also provides industry-standard PDF creation, batch scan capabilities, send-to-fax and the ability to accept files from a digital camera. Users can also have the program automatically redact and highlight digital documents on the fly as part of a preconfigured workflow.

"A key strength of this solution is that it uses Nuance's OCR technology to create searchable electronic documents after scanning a document from the MFP or by opening an

existing digital document using the program's Get and Convert feature," commented Reider. "Furthermore, the program can be pointed to recognize certain characters if the document contains tricky fonts or is not so well preserved."

"Xerox understands customers are looking for ways to reduce their printing and streamline everyday processes. Our Scan to PC Desktop solution was designed to do exactly that," said Siddhartha Bhattacharya, marketing manager, Global Office Products and Solutions, Office and Solutions Business Group, Xerox. "BLI's recognition will be important to our customers who are looking for ways to simplify work. Xerox's Scan to PC offers an all-in-one solution package that can fit into any type of business environment. This allows a novice or an advanced user to find cost and efficiency savings very quickly."

About **BLI Pick Awards**

Twice a year with its "Pick" awards, BLI gives special recognition to the hardware and software products that provided the most outstanding performances in BLI's unique evaluations. Software solutions undergo an in-depth hands-on review that focuses on key attributes for a solution's target market and compares how well the product stacks up against leading competitors. "Pick" winners rise above the competition in key areas such as value, feature set, ease of use, ease of administration, hardware compatibility, software integration, security and support. Software solutions earn an overall rating based on a five-star scale, and "Pick" contenders are culled from those that earn the highest ratings. Consequently, a BLI "Pick" is a hard-earned award that buyers and IT directors can trust to better guide them in their acquisition decisions.
