

EFI SendMe Fingerprint and ID Card Authentication – Quick, secure, and self-contained; no integration required

Fingerprint and ID Card authentication options

Provide fast and efficient access to EFI SendMe with optional Fingerprint or ID Card login. Both Fingerprint and ID Card options are quick and secure, and no passwords need to be typed. And because the Fingerprint and ID Card options are self-contained, no customization of the user's access control system is required.

The EFI SendMe ID Card Authentication supports the HID, Indala/Motorola, and Cassi-Rusco standards, used by over 50 manufacturers of ID card systems.

Print Package option

Import and assemble files from digital media (USB drives and digital camera memory sticks) with the EFI SendMe Print Package option. EFI SendMe's secure print server also allows native file printing from email attachments (including Blackberry) and from the printer manufacturer's print driver. Users can only access and print their own documents after login.

Seamless business process integration

EFI SendMe works with all of the leading network infrastructures, including LDAP, Active Directory, Exchange and Lotus. EFI SendMe can be easily customized to integrate seamlessly into your digital workflow, regardless of your document management system or enterprise software application. Customize your EFI SendMe workflow and user interface with simple API (application program interface) scripting. Designate document types to be routed to preset destinations, including email, fax, hot folders, network printers, and document management systems.

EFI SendMe is compatible with most networked scanning engines, including the leading copiers. It also works with any document destination and provides a streamlined workflow that links many different components. EFI enriches SendMe technology with prepackaged connectors to most popular document management and routing solutions. Connectors are available as free download.

Manage and send any document

EFI SendMe doesn't care what type of document you want to deliver. Send, file or store your purchase orders, forms, instructions, articles, contracts, pictures, invoices, digital Bates Stamped documents, and any other documents. Reduce costly routing errors and save time with a streamlined one-stop ATM-style workflow.

Touch-screen convenience and control

EFI SendMe combines plug-and-play utility with touch-screen simplicity. EFI SendMe's large screen provides full-page or thumbnail preview capability before sending. The intuitive touch-screen interface virtually coaches users through all workflow process, while one-click workflows provide speed and efficiency for common tasks. EFI SendMe is easy to set up and requires little minimal training to achieve working familiarity. Transform paper documents into digital files with B&W and color scanning support.

While many users find typical copier LCD displays confusing to navigate, EFI marries function with speed to enhance efficiency and offer measurable productivity.

Leverage your existing copier and IT investments with EFI SendMe for immediate savings and enhanced productivity

Touch-screen editing tools

EFI SendMe's powerful, yet easy-to-use editing tools allow operators to assemble, edit, clean-up, and add comments to documents. Convenient touch-screen direct image editing enables operators to add text and shapes, cut and paste, erase, reorder pages, and highlight text or images. Unwanted marks and borders may be cleaned with skew and despeckle tools, and contrast and brightness are easily adjusted. Designate draft, approved or confidential material with handy digital "rubber stamps," and add PDF annotations for viewing in Acrobat Reader. Documents can be marked and organized with digital Bates Stamping.

EFI SendMe allows users to select the optimum file size to provide the best document quality. Convert paper documents into industry-standard digital file formats: PDF, JPEG, TIFF and MTIFF.

Fast document searches

Document searches are quick and easy with EFI SendMe. Use EFI SendMe's OCR (optical character recognition) feature on PDF files to automatically create a hidden text layer, enabling you to search scanned documents for words, extract text, and perform document indexing.

Advanced technology adds value, flexibility and ease of use

Connect EFI SendMe to any networked multi-function peripheral (MFP) or TWAIN-compliant scanner to convert your paper workflow to a digital workflow. EFI SendMe easily integrates with corporate network and e-mail lists. A simple administrator's application lets you customize the user interface and enjoy centralized management of multiple networked units. EFI SendMe also tracks usage, provides 128-bit encryption for additional security, and implements advanced Fiery® smart compression technology to enhance both security and speed.

Complete walk-up workflow

EFI SendMe offers a complete walk-up environment similar to an ATM. Since all document delivery options are available next to the MFP, no additional desktop software is required. And because the user is never separated from the document, the workflow cannot be broken, and potential security issues are averted. EFI SendMe's one-stop workflow also prevents the distractions that can introduce errors and diminish productivity.
