

Xerox Scanning Solution proves **good return** on **investment** for EURINVEST

The Results:

- Implementation of an advanced, fast and simple scanning solution
- Installation of an archiving protocol
- Possibility to switch over to the Macintosh® Apple network
- Reduction of archiving and consulting time for the users
- Improved customer relationship management

The Challenge:

File archiving and management on acquisition and lease and letting of business sites in Europe.

The Solution:

Xerox WorkCentre® M24 and ScanFlowStore® 4.5 Basic.

ScanFlowStore®

WorkCentre M24

Real Estate Case Study**The Challenge:**

The Paris branch employs about fifteen people who all make use of the office automation system. The objective of the solution was to fulfill the photocopying, printing and archiving needs across the Macintosh and Microsoft® Windows network, and to manage document archival (photographs, working plans, drawings, state of rents policies, construction specifications, etc.), as well as archival of OCR'd PDF formats on the MAC server. The scanned files had to be placed in the specific personal directories of each employee, whether the computer was a PC or a Macintosh. The created documents had to be uncompromisingly accessible to the employees.

The Solution:

ScanFlowStore, a product exclusively dedicated to the range of Xerox multifunction products (MFPs), is the ideal solution for companies that aim to combine the advantages of the Xerox solutions with an easy-to-use tool.

ScanFlowStore is middleware, which means that it operates invisibly for the user between the Xerox MFP and Microsoft® Windows. Users only have to put the document on the Xerox WorkCentre Pro, select a destination and return to their workstation to find the document as a PDF text and image file in the specific directory. The optional information entered via the touchscreen on the MFP converts the information and activates the tasks, such as the creation of directories and subdirectories.

ScanFlowStore has been developed as a result of listening to the wishes and needs of Xerox users, while allowing for the importance of simplicity. As a result it is not necessary to install additional software on the local workstations, as ScanFlowStore runs on a central server.

Overview of ScanFlowStore functionality

- Scanning to one or more personal directory structures in Windows and Apple
- Conversion of documents to an OCR'd text searchable PDF file in 14 languages
- Conversion of color documents to an OCR'd text searchable PDF file
- Emailing scanned documents via the Color/Email module
- Scanning to a Windows or Apple directory
- Direct scanning to a database in DocuShare®, SharePoint®, etc.
- Possibility to make color and multipage scans in OCR'd PDF format on the M24
- Possibility to scan to an email distribution list on the M24
- Possibility to scan to a collection SMB Apple on the M24

The Results:

With ScanFlowStore, EURINVEST is able to digitally archive its documents, while reclaiming office space by reducing the physical size of the archive. The solution also allows employees to share files seamlessly across the network.

The acquisition of ScanFlowStore adds additional tools to the Xerox MFPs, which fully justifies the investment in the Xerox devices. With ScanFlowStore and the Xerox WorkCentre Pro, EURINVEST takes the first step into the EDMS (Electronic Data Management System). ScanFlowStore adds real value to the Xerox MFPs.

For Gérard Adda, direct scanning into Macintosh and the ability to avoid time-consuming document processes were the main objectives of the project. A half day was sufficient to install the solution and train its users.

“When we proposed this investment to Mr. Adda,” declares Samer Nasreddine from Xerox DSRD, “we knew that he would be very interested in this advanced scanning functionality. This unique solution makes the difference. We have provided EURINVEST with a simple global archiving solution that makes the scanned files even more quickly accessible on the Macintosh computers, as well as on the PCs, that are in use in the company.”

Customer Profile:

The Paris concessionaire Document Store and X-Solution have implemented an advanced scanning solution at a customer whose office automation equipment consists of PCs and Macintosh computers.

EURINVEST is a real estate company. Its objective is to improve and commercialize real estate programs. EURINVEST is an investment company that specializes in the acquisition of commercial properties in the best business streets and regions in Europe.

The methods of investment of its “L&G” group consist either of the acquisition of already-rented or not-yet-rented commercial properties or commercial properties becoming vacant.

**Working together...
getting results.**

Together we can.
