⁴ Requires latest software

Xerox® Office and Light Production

Industry Certifications

Print Driver / Server Environment Certifications

WHQL Certification

Windows Hardware Quality Labs testing involves running a series of tests on third-party hardware or software, and then submitting the log files from these tests to Microsoft for review. Xerox products that are Windows Hardware Quality Labs (WHQL) certified comply with Microsoft standards and ensure seamless compatibility with MS Windows environments.

Citrix Certification

Citrix Systems is an American multinational software and services company that specializes in virtualization and remote access software for delivering applications over a network and the Internet. Xerox is part of the Citrix ready program, which allows vendors to perform a self evaluation of its product against a set of metrics outlined by Citrix. Once the product passes certification, Xerox pays an annual fee for having its certified products listed on the Citrix website as well as the right to use its logo. This certification ensures that a product using Citrix software will function as expected in a remote environment.

IPv6 Ready

Internet Protocol version 6 (IPv6) is a relatively new protocol for routing network traffic and identifying network-connected devices. IPv6 will be phased in over many years as the next-generation replacement for the global IPv4 standard. Because printers and multifunction printers comprise a sizable percentage of the world's networked devices, Xerox is transitioning its products' capabilities to be IPv6-compatible.

Bonjour®

Bonjour is Apple Inc.'s trade name for its implementation of zero-configuration networking, a service discovery protocol. Bonjour enables automatic discovery of devices such as printers, other computers, and the services that those devices offer on IP networks using industry standard IP protocols.

HP Output Server (HP OS)

HP OS enables centralized management for tracking and controlling, allowing users to easily incorporate new output destinations. Other manufacturers of print devices may choose to become HP Output Server-certified. Certified device configurations for selected non-HP print devices are provided by HP at the manufacturer's request utilizing the HP Device Certification Program.

Application Certifications

Cerner Certification

Cerner is the leading U.S. supplier of healthcare information technology solutions that optimize clinical and financial outcomes. Around the world, health organizations ranging from single-doctor practices to entire countries turn to Cerner for their powerful yet intuitive solutions. Cerner offers clients a dedicated focus on healthcare, an end-to-end solution and service portfolio, and proven market leadership. Xerox pays Cerner for product certification, which is a 6-8 week process after the product is received in Kansas City. Once certified, Cerner lists the product on its internal customer website and sends Xerox a certificate. This certification allows Xerox to participate in customer bids where Cerner Certification is a requirement. Xerox also provides a product, including all supplies and service, to Cerner until that product is at end of life. Cerner certification is important to a customer's IT staff as this allows them the comfort of having 24/7 support 365 days a year, through the Cerner help desk. Cerner provides this support as part of their HIS package. For example, a hospital can call and report a downed printer in the Emergency room at 3 A.M. and receive remote support for that printer.

MEDITECH Certification

Medical Information Technology, Inc. (MEDITECH), a leading provider of integrated software solutions for healthcare organizations worldwide, has recently certified a number of Xerox devices. This certification validates that Xerox devices are fully compatible with MEDITECH's MAGIC operating system; a health information system that provides a structured and easy-to-use programming language to more than 1,500 healthcare organizations worldwide. With this certification Xerox continues to achieve noteworthy healthcare industry praise for its award-winning line of devices. As part of the certification process, MEDITECH provides print-ready files that contain sample reports in various formats from all MEDITECH MAGIC applications. Xerox prints these documents on its devices and then ships them to MEDITECH so they can compare the quality of those prints to a master set of prints, confirming that the shading, borders and all characters match precisely. Once these quality checks are made, MEDITECH certifies the product and lists it on its customer website. This certification allows Xerox to participate in customer bids where MEDITECH Certification is a requirement. These certified devices are then fully supported by MEDITECH help desk technicians 24/7, 365 days a year, giving their clients and ours the assurance that support will be available at all times.

SAP Certification

Xerox, together with SAP through our Gold-level membership in the SAP Printer Vendor Program, provides seamless connectivity between SAP systems and your Xerox printers and MFPs. And as an SAP customer you benefit from having SAP-certified Xerox device types available right from SAP's online delivery model. Whether you are using an existing Xerox product or plan to upgrade, you can be assured that you will have printing continuity within your SAP environment. You also have the peace of mind knowing that you can contact SAP for support regarding any device type issues. And Xerox has a direct link to SAP that allows us to keep our device types current and in line with SAP release updates. SAP-certified device types are available for the legacy R/3 system and newer ERP releases all the way up to current SAP offerings.

Xerox® Office and Light Production

Industry Certifications

Security Certification

Common Criteria Certification

Common Criteria Certification provides independent, objective validation of the reliability, quality, and trustworthiness of IT products. It is a standard that customers can rely on to help them make informed decisions about their IT purchases. Common Criteria (aka ISO15408) sets specific information assurance goals, including strict levels of integrity, confidentiality, and availability for systems and data, accountability at the individual level, and assurance that all goals are met. Common Criteria Certification is a requirement for hardware and software devices used by the federal government on national security systems.

FIPS 140-2

All hardware and software components that are used by government and other key industries for the purpose of collecting, storing, transferring, sharing and disseminating sensitive but unclassified information are required to be FIPS 140-2 certified. FIPS 140 is a series of coordinated requirements issued by the National Institute of Standards and Technology (NIST) to validate the product's level of security depending on its intended use.

Environmental Compliance

ENERGY STAR®

With the goals of reducing energy consumption and greenhouse gas emission, ENERGY STAR is a voluntary program sponsored by the United States Environment Protection Agency. Products carrying the label are certified for matching or beating federal energy conservation standards.

Blue Angel

Based in Germany, Blue Angel was the world's first certification for environmental friendliness. Its purposes are to promote ecological awareness and to guide environmentally conscious consumers to the most ecologically sound products.

Environmental Choice

Canada's environmental friendliness certification is especially stringent. The Environmental Choice EcoLogo™ program mandates strict environmentally conscious requirements must be met throughout the life-cycle of the product, and it must also meet performance requirements when compared to its closest alternatives.
