

Feature Support Information for Xerox MFPs and Printers

Xerox CentreWare® Web 6.0 is a productivity tool designed to help you manage and monitor multifunction printers (MFPs) and printers on your network. It provides a broad range of tools and features to accomplish this.

Because the Xerox equipment portfolio has evolved over time, not all device management features offered by Xerox CentreWare Web 6.0 are supported on every printer or MFP. This document is intended to provide guidance as to which of the key groups of features are supported on each member of our printer and MFP portfolio.

The features groups addressed are:

Basic Compatibility—Able to discover, monitor and provide alerts.

Firmware Upgrade—Able to remotely apply printer or MFP firmware upgrades.

Protocol Configuration Settings—Able to remotely change printer configuration for such things as TCP/IP settings.

Administrator Password Changes—Able to remotely change the device's administrator password.

Job Based Accounting / DocuSP / Phaser Accounting—Able to retrieve printer (Phaser) or MFP (JBA) device utilization information (in support of such activities as fleet management, auditing or internal bill-back).

Device Support Updates

CentreWare Web 6.0 and later has the ability to update its list of supported devices. This extends the list of devices that firmware updates can be applied to, the devices that protocol settings can be applied to, and what devices can be used with Network Accounting. This alleviates the need to have a new version of CWW to expand device support.

Usage

1. Go to Administration\Advanced and select Xerox CentreWare Web Updates
2. In the Device Configuration Settings section select the Update button.

NOTE: This document may not include all currently available Xerox MFPs and printers. Contact your Xerox sales representative for more information.
