

Xerox® Print Service

An Android™ Plug-in for seamless printing to Xerox® devices.

The Xerox® Print Service Plug-in for Android enables printing to many Xerox® printers and multifunction printers without the need for third-party apps or additional print drivers. Easily print photos, web pages and documents when your mobile device is connected to a compatible Xerox® printer through a wireless network. Control print settings, including colour, number of copies, paper orientation, staples, secure code release printing and more.

With Android 4.4 or later devices, printing support is built into the operating system. You can find and print to Xerox® printers or multifunction printers that are on a wireless network by downloading the Xerox® Print Service Plug-in app from the Google Play™ store.

Key Features

- Easy mobile printing
- A free download Plug-in from the Google Play store
- A robust print option set – two-sided printing, stapling and other features
- Secure Print / Secure Code Release
- Discover Xerox® printers automatically or enter manually
- Supported for users of Android-based devices (Android 4.4 or later) using a free download available in the Google Play store
- Easily print photos, web pages, PDFs and other documents when your mobile device is connected to a compatible Xerox® printer through a wireless network*

* When a new app is added to the Android OS / print service support list, that app will also be supported within the Xerox® Print Service Plug-in, as well.

Challenges

People want to print from their mobile devices, yet over 50% of smartphone users and over 35% of tablet users do not know how to print from their device because they don't have a printer that connects to their mobile device.*

- Mobile device users don't have access to a printer or the mobile device does not support mobile printing.
- Android devices are unable to discover nearby printing options.
- Need simple usability with more advanced print option features.
- Need a Secure Print / Secure Code Release workflow.
- Want PC-like print capabilities without the hassle on an Android.
