## Secure Document Release with Equitrac®

### Secure Printing for Every Networked Printer

Printing should be easy. Users want the ability to print documents from anywhere, anytime and pick up their jobs at the time and location of their choosing. Nuance Equitrac print management software makes this a reality – and eliminates the risk of private information being left at a printer, reduces wasted paper, resources and money from documents left unclaimed, and saves valuable time that can be lost through inefficient printing.

While many print management software platforms offer secure release for some printing devices, print environments inside organizations are not identical. A mix of MFPs and networked printers – often from a variety of manufacturers – requires a variety of methods for releasing print jobs. With Equitrac, organizations can extend these secure print release benefits to every printer.

### Follow-You Printing® with Secure Document Release

A standard component of every Equitrac Office® and Equitrac Express® solution, Equitrac Follow-You Printing® with Secure Document Release supports user mobility while helping to reduce waste and protect personal information or client confidentiality.

Equitrac offers the flexibility of deploying Secure Document Release through flexible print release options to deliver secure printing across the entire print fleet. Every Equitrac print release option supports user authentication to ensure that print jobs are only released when the user is at the device. From the simple Swipe and Release capabilities of the Nuance ID Controller™, through more advanced user control options delivered through the Equitrac PageCounter™, Web Release or MFP embedded clients, Equitrac provides convenience and control over output across the entire fleet.

With a small form factor, Nuance's ID Controller lets organizations incorporate even the most basic output devices – single function printers – into their secure printing network.

The ID Controller features a status indicator that is readily visible with bright LEDs and supports both USB and Ethernet connections.

Users can retrieve print jobs securely and easily at every printing device on the network through Equitrac's broad range of secure document release options: Nuance ID Controller, Equitrac PageCounter, Equitrac Embedded clients and Web Release.

## Secure Document Release Options for Every Printing Device

### Nuance ID Controller™

Comprised of a small form-factor hardware component and a card reader, the ID Controller lets users swipe their ID card and release their documents stored in the Equitrac print queue.

### Equitrac PageCounter™

A compact and flexible terminal for advanced print and copy control at printers or MFPs, the PageCounter integrates into existing IT networks and mounts directly on most devices.

### Equitrac Embedded Clients for MFPs

Embedded clients provide the most available options at the time of print release directly from the control panel of the MFP. They offer maximum user control without the need to purchase and maintain external terminals.

### Web Release and Mobile Web Release

Complete secure document release workflows can be accessed from a Web browser at a PC located next to the printer, or from any mobile device browser.
